

Flatpack Ecojoiner v3.0

Scaled reference drawing: 62%; dimensions in mm. Do not trace as 1:1.

All pieces: 12mm plywood / wood thickness.

The ecojoiner is made available freely to the world to design and innovate with bottles and wood to create great furniture, structures and anything else that can make life on Earth better and greener for us, our fellow humans and creatures. In future iterations, please use the ecojoiner name, refer back to ecobricks.org and share reciprocally.

Default input variables

slat thickness: 12mm
port length: 70mm
port height: 83mm
cap hole: 32mm
collar hole: 34mm
screw holes: M6 / 6mm
fit clearance: 0.20mm

Derived dimensions:

john height = port height - 2 x slat thickness = 83 - 24 = 59mm
john length = 2 x port length + port height + 4 x slat thickness = 271mm
slot width = slat thickness + fit clearance = 12.2mm
saddler = 83mm wide x 94mm high; bottom notch 59.2mm x 24.2mm

Version 3.0 of the Ecojoiner

Invention by Russell Maier
Engineering by Richard Graham
This autogenerated ecojoiner design is developed and shared under the CERN Open Hardware Licence, Strongly Reciprocal license (CERN-OHL-S-2.0).
